

User Story: Purchase Analytics Dashboard

Business Need

As a **business stakeholder**, I need a **visual dashboard to track customer purchase behavior and sales performance** so that I can make data-driven decisions about inventory, marketing, and business strategy.

Current Situation

We have an e-commerce platform processing orders, but no way to visualize or analyze purchase patterns. Business questions like "Who are our top customers?", "What products sell best?", or "How is revenue trending?" require manual database queries or spreadsheet exports.

Desired Outcome

A self-service analytics dashboard that provides real-time insights into:

Customer Insights

- Who are our top-spending customers?
- How many repeat customers do we have?
- What's the average customer lifetime value?
- Which customers haven't purchased recently?

Sales Performance

- What's our daily/weekly/monthly revenue trend?
- How many orders are we processing?
- What's the average order value?
- How does this month compare to last month?

Product Intelligence

- Which products are bestsellers?
- What's the revenue breakdown by product category?
- Which items frequently sell together?
- What products have declining sales?

Operational Metrics

- How many orders are pending vs. completed?
- What's our order fulfillment rate?
- Are there bottlenecks in order processing?
- What percentage of orders get cancelled?

Success Criteria

- ☑ Business users can access the dashboard without technical help
- ☑ Data updates automatically (real-time or near real-time)
- ☑ Dashboards are visual and easy to understand (charts, graphs, tables)
- ☑ Users can filter by date ranges, products, customer segments
- ☑ Reports can be exported for presentations
- ☑ No disruption to existing operations

Implementation Approach

Add a business intelligence tool that connects to our existing order database and provides pre-built dashboards for common business questions. Dashboard should be accessible via web browser.

Out of Scope

- Predictive analytics / forecasting
- Customer segmentation automation
- Marketing campaign integration
- Inventory management features
